

## Surgical Solutions Launches OpsGUARD™ Suite to Advance Hospital Performance Improvement

[Overland Park, KS; August 12, 2025] – Surgical Solutions has launched **OpsGUARD™**, a proprietary performance improvement platform that powers the company’s hospital support services. Designed to ensure the highest quality, efficiency, and compliance in every engagement, **OpsGUARD** also gives hospital partners real-time visibility into key operational metrics.

Built into Surgical Solutions’ service model, **OpsGUARD** combines operational auditing, asset management, and analytics into one secure, cloud-based platform. This enables the Surgical Solutions team to monitor and optimize service delivery, while providing hospital leaders with interactive dashboards, color-coded indicators, and trend analysis they can use to make faster, more informed decisions.

**OpsGUARD** Consists of Three Core Modules:

- **ProcessGUARD™** – Automates operational audits with customizable workflows, real-time dashboards, and instant reports to ensure compliance and consistency.
- **AssetGUARD™** – Tracks medical equipment, manages repairs, and holds vendors accountable to reduce downtime and improve return on assets.
- **InsightGUARD™** – Translates operational data into actionable insights, showing KPIs, utilization, and cost drivers in real time.

In practice, if Surgical Solutions detects a performance anomaly in a surgical department, the team can investigate, identify root causes, and take corrective action, often before the hospital staff experiences any disruption.

By combining operational auditing, asset management, and analytics into one platform, **OpsGUARD** eliminates data silos and manual reporting. Leaders get a complete, at-a-glance view of performance which reduces excess time spent hunting for data.

“Our team uses **OpsGUARD** every day to measure and improve the quality of our services,” said Ben Schreder, SVP of Strategy & Transformation at Surgical Solutions. “It gives us and our partners a clear, real-time view of performance so together we can respond faster, work smarter, and deliver better patient outcomes.”

**OpsGUARD** is built to adapt to hospitals of any size and is available exclusively to Surgical Solutions’ partner hospitals. The platform provides a technology foundation for achieving operational excellence, supporting compliance, preparing for accreditation, reducing workflow disruptions, and optimizing asset utilization.
